TO WHOM IT MAY CONCERN

We are part of an international US based organisation. Scientific and Technical Recruitment has been the preferred supplier of staff, both permanent and temporary, for Invitrogen in New Zealand since 1987. In that time we have been impressed with the consistent level of service that Scientific and Technical provides, and use their services nationally to fill most of our recruitment needs. Invitrogen's organisation is diverse in terms of recruitment needs in New Zealand, employing more than 140 people at three main sites nationwide. Positions that Scientific and Technical have recruited for us are: Research Scientists, QC Scientists and Technicians, QA Officers, Customer Services, Product Management, Sales Representatives, Marketing Management, Maintenance/Engineering, Production Management, Warehouse & Distribution, Process Workers and Secretarial staff. The people employed range in qualification from Ph.D's to school leavers, with a heavy emphasis on higher tertiary qualifications.

We are very happy with this association. Scientific and Technical go out of their way to understand our company, the culture and our strategic goals. The consultants liaise before, during and after each assignment and in a few instances, when there have been problems, honour their guarantees and go out of their way to achieve resolutions. While many factors have contributed to the growth of the business during the past 15 years, one is undoubtedly the calibre of people we have working here, very many of whom have been engaged through Scientific and Technical Recruitment.

Should you require further information we are happy to be contacted by telephone.
